Gianluca Palmier – Backend Engineer (Node.js / NestJS)

Barcelona, Spain *hello@gianluca.dev* *+34745079234* *in/gianlucapalmier* *gianluca.dev*

TECHNICAL SKILLS

Backend: Node.js, TypeScript, Java (Spring Boot), NestJS, Express, API design, design patterns
Architecture: Modular architectures, serverless, event-driven systems, asynchronous processing, domain modeling, API contracts, automated testing, observability, CI/CD
Databases: PostgreSQL, MySQL, SQL Server, DynamoDB, MongoDB, Redis
Cloud & DevOps: AWS, ECS, API Gateway, Lambda, RDS, GCP, Docker, Vercel
Integrations: WhatsApp Business API, Mercado Pago, OpenAI API, Google Calendar API, Firebase
Frontend: React, Next.js, Vite
Languages: Native Spanish, professional working proficiency in English

PROFESSIONAL EXPERIENCE

IMA Health — **Barcelona, Spain**
Senior Backend Engineer — Hybrid — *September 2026 – Current*

- Contributed to the migration of a hybrid AWS architecture toward a serverless approach.
- Designed, developed, and deployed backend services and scalable APIs using Node.js and NestJS, with OpenAPI contracts.
- Implemented event-driven services on AWS, focusing on modularity, resilience, and cost efficiency.
- Modeled, integrated, and optimized data in MySQL and DynamoDB to build maintainable, secure workflows.
- Contributed to training and mentoring developers on the engineering team.

City Government of Ceres — **Santa Fe, Argentina**
Technical Lead / Backend Engineer — Hybrid — *January 2021 – June 2026*

- Led backend architecture for citizen-facing and internal digital products, defining service boundaries, API contracts, data models, authorization, and integrations across messaging, web, payments, and operational tools.
- Evolved services from a hybrid architecture toward serverless. Designed data models in DynamoDB and relational databases managed with RDS, and implemented event-driven workflows and asynchronous processing.
- Developed services and integrations to digitize tax bills and online payments, helping eliminate paper printing and save approximately ARS 6 million in printing costs.
- Designed and led the incremental migration of a legacy Express backend to NestJS, introducing domain-based modules, typed contracts, validation, testing, and observability without disrupting critical services. Improved production practices through Docker, CI/CD, monitoring, and observability.
- Provided technical leadership to two developers over the last two years, including code reviews, technical decisions, work planning, mentoring, and delivery coordination.

EDUCATION

University Technical Degree in Programming — **Santa Fe, Argentina**
National Technological University (UTN – Rafaela Regional Faculty) — *January 2023 – July 2025*

CERTIFICATIONS

AWS Cloud Fundamentals — *August 2025*
AWS Entrena Argentina

PROJECTS

Mentesana.app — *January 2025*
Eureka Program – Santa Fe Province, Argentina

- Developed the backend, data model, and OpenAI integration for an emotional well-being platform for teenagers.
- Implemented privacy safeguards and security controls for handling sensitive data, working alongside a frontend developer.
